Authorized as second class mail,
Post Office Department, Ottawa.

GLEICHEN, ALBERTA, WEDNESDAY

APRIL 23, 1952

SUBSCRIPTION \$2.00 PER YEAR

Report of Last Meeting of Town Council

A regular meeting of the town council was held with Mayor Colpoys and Councillors R. K. Hunter, H. A. Wilson, E. Bolinger, S. Hampton, F. Michael and U. A. Jones present. The regular meeting of April 16, 1952, was adjourned. This by-law is to authorize the sale of the Community Hall to Mr. E. H. Richards for the sum of \$1500 in accordance with the resolution pertaining to the sale, and subject to a plebiscite of the property electors of the town.

S. E. Lester, the town engineer, gave a report of the Civil Defence course attended by him at Edmonton. The report was accepted and efforts were to be made to organize the town and its women's auxiliary into Civil Defence as one Civil Defence unit.

The business mill for this year will be the same as it was in 1951 namely 15 miles.

The report of Mr. Johnson, sanitary inspector was read and adopted. It was ordered referred to the health board.

It was decided to send someone to the Fire Course in Calgary if possible. The fire chief was to be asked to attend the course and go to get a suitable substitute. The bill is to any reasonable expenses over and above subsistence.

The report of the theatre inspector was read and ordered filed.

It was voted to amend. That applications for water services received from the residents on 7th and 8th Avenues be accepted on the condition that they present at least seven signed applications, together with a deposit of \$300.00. The amount to be deposited is to be determined by the council that they will look up to the system, and when the applications together with the deposits have been received, the council make application for a loan of \$4,000 under the self liquidating loan.

The mill rate for 1952 was set at 52 mills.

The secretary was instructed to prepare a bylaw for submission, in due course, by the engineer to the proprietor elector for issuing a debenture of \$25,000 for street improvement and drainage at 10 years.

WHY NOT PRINT A CLEAR PICTURE

There is a group of people who are trying to confuse the rural electrification picture in Alberta. They are undoubtedly sincere in their desire to make the utility a publicly owned affair. They use comparisons between Alberta and Saskatchewan to entice the public to support their view. It is true that Manitoba builds the lines direct to the farm to be served and that there are 27,000 farms already electrified in Manitoba. It is also true that the Manitoba Power Commission has given the provincial government the sum of \$35,000,000, with an addition of \$10,000,000 under authorization and not yet expended. This part of the story is never mentioned from the public platform. The public in Manitoba has had a surplus of power since 1910 and has been in the rural electrification picture for twenty years. Likewise, the Saskatchewan Power Commission owes the Saskatchewan public a great debt of \$41,000,000. This province has made bones of its inability to construct free rural lines to farm premises. Saskatchewan is not so fortunately situated as either Manitoba or Alberta in the matter of power resources. She has few large potential areas near centres of population. Should Alberta decide to make power a publicly owned utility at the present time, the province would be required to assume an additional bonded indebtedness of \$100,000,000. As far as Alberta goes at the present time, Alberta must enjoy rates as low as Manitoba and lower than Saskatchewan and are not carrying any bonded indebtedness as an indirect charge against the utility. Another interesting fact is the statement that Manitoba's 27,000 rural installations are confined within a geographical area of less than one third the area in Alberta from its Edmonton district south to the International border, eliminating the Peace River area entirely.—Carrie Canadian.

Lake Superior is the deepest of the Great Lakes.

News Items of Local Interest

Left: Hatton who is attending college in Edmonton spent last week in town visiting his parents.

Everybody is busy these days clearing up the yard. In another week or so the town should look spick and span.

Companies looking oil will start drilling in the district soon. One is scheduled to go down northeast of town and another north west at Hammer Hill.

With gangs drilling for oil and work on the Trans-Canada highway this year there should be plenty of activity in town the summer.

The ladies of the Catholic Church had a sale of home cooking last Saturday in the drug store. The sale was a success in every way.

Tuesday—Thursday, April 24, 1952, the final date set by which all Alberta passenger cars should be equipped

F.W.U.A. Meeting

The regular meeting of the Gleichen F.W.U.A. met at the home of Mrs. Fred Habke with fifteen members and one visitor present. The meeting opened by singing "You Are Special".

Business was conducted in secret, followed by the creed. The

was an exchange of seeds and plants. Several kinds of plants and seeds were brought and all seemed pleased with the exchange.

The president, Mr. McBeath, presided over the meeting and the usual business was dealt with. Donations were sent to the Juniors and Salvation Army.

Gabriel Corbeil will attend the Young Farmers' Week as delegate.

The meeting was adjourned until Mr. J. McArthur and Mr. C. Nelson are improved in health.

Ms. D. Yule read a bulletin on "Diseases of the N. N. McMillan read about "Skin Diseases" and their cures.

A delicious lunch was served by the trustees and the lunch committee. A social hour followed.

The next meeting will be at the home of Mrs. Nellie McMillan on May 1st with a Mother's Day program.

Cancer Appeal

The key to cancer control may lie in the basic secrets of life, according to the Canadian Cancer Society. Most of the money dollar Cancer Society spends is spent on research aimed at uncovering the mysteries of growth, both normal and abnormal.

It seeks to establish the laws of cell life. It tries to determine how the normal cell lives, grows, ages and dies. Once these facts are known, it will be much easier to learn why the cancer cell never ages and why it never dies until it has killed the host which harbors it.

Many of medical science's major breakthroughs have come through research. Sometimes by accident; more often as a result of careful planning and incredibly detailed work, basic scientists are learning how to destroy the malignant cells what would destroy the body.

The University of Alberta is the centre of cancer research in this province. At the present time five projects in fundamental research are under way at the university, under the leadership of the National Cancer Institute of Canada, but with the financial support of the Canadian Cancer Society.

In 1951 the Alberta Division of the Society endowed a cancer research bed at the University of Alberta Hospital. It is the first of a series of patients, all of them, stricken with some form of cancer.

The Cancer Society bears all the cost of hospitalizing these patients and provides a fund from which is bought the equipment and supplies necessary in the study of problems relating to cancer, and in particular to studies being conducted on patients in this bed.

More research is turning up facts that eventually will lead to a thorough understanding of the nature of cancer, and some day, to its complete control.

This important work is supported by gifts to the Cancer Crusade.

with new licence plates.

Clarence Nelson has been confined to a hospital in Calgary for some days, suffering from pleurisy and pneumonia.

A large number of gravel trucks and trailers arrived in town the last couple of days. They will be used to haul hard surfacing material for the Trans-Canada Highway. Hard surfacing is to be put on the corner, where the end of the alignment is at the present time, at the three mile corner. Several trailer camps have already been set up there.

Last Thursday about five o'clock in the afternoon the fire whistle blew out the fire fighters to fight a prairie fire several miles south of town on the east side of the highway. The wind but the highway to Arrowwood was an effective barrier to the fire. The fire was held in check and south was soon beaten out.

The house guests were entertained with their hosts in the living room after dinner, chatting pleasantly while the 5-year-old daughter of the hostess sang some songs to the girls dancing while she sang. She could scarcely articulate, so great was her emotion, and her parents rose in consternation as she entered. "You sing", the little girl babble pointed to the male of the house. "You are the one who left the seat up."

Canada is one of the few countries in the world which has standard gaillards right across the country.

Leather Jackets Presented to Hockey Team

The dance staged last Friday night by the young people was a grand success. It was attended by many people from the surrounding towns. Mr. Brown was master of ceremonies and called upon Major Colpoys to address the Midget Hockey team and the crowd. Mr. Colpoys congratulated the hockey team on the success they had achieved in the season and going into the final playoff. At the conclusion of the speech Mr. R. Black, president of the Chamber of Commerce, presented all the members of the team with leather jackets. The manager and coach of the Midgets was present with a radio by the players. The purchase of the leather jackets was made possible by the donations given by their admirers who claim that the young hockey players last winter was the best seen here in many years.

A civil servant is a person who serves the people according to law. A bureaucrat is a civil servant who distills every drop of authority from the law and, when drunk with it rules the people. The great majority of civil servants and bureaucrats are honest. Some are not. Some bureaucrats are fanatically honest. They know what is good for the public better than the public itself knows. They are determined to do it to the public for the public good, come hell or high water. They are dedicated men who strive to avoid their own duties by passing laws

Notice of Preparation of Assessment Roll

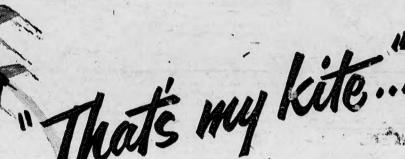

TOWN OF GLEICHEN ASSESSMENT ROLL 1952

Notice is hereby given that the assessment roll of the Town of Gleichen, made under the provisions of the Assessment Act, has been prepared by adoption for the year 1952 of By-Law 395 as prepared for 1951 and will for thirty days be open to inspection at the office of the secretary-treasurer of the Town from ten o'clock in the forenoon until four o'clock in the afternoon on every day which is not a public holiday, except Saturday, and on that day from ten o'clock in the forenoon until two o'clock in the afternoon and that any person who desires to object to the entry of his name or that of other person upon the said roll, or to the assessment of any property must within thirty days from the date of this notice lodge his complaint in writing with the Secretary-Treasurer of the Town of Gleichen.

Dated this 21st day of April, 1952.

A. HORN,
Secretary-Treasurer.

through which they abdicate and upon the citizens the right of appeal to the permanent servants of bureaucrats to rule courts when they are harmed by the people. Many such laws deny arbitrary acts of bureaucrats.

"...I'm one of the Aircraft Technicians that give it a 'D' (daily inspection) and keep it in top flying shape. We take personal pride in the work that we have been trained to do. Our aircraft are ready to fly in defence of freedom."

MORE MEN ARE NEEDED NOW IN THE R.C.A.F. TO TRAIN AS AIRCRAFT TECHNICIANS

AERO-ENGINE • INSTRUMENT • RADIO-RADAR • ARMAMENT • AIRFRAME

These men have an important job in the operation of Canada's expanding Air Force.

As a skilled R.C.A.F. Aircraft Technician, you will gain valuable technical and training experience—receive good pay—30 days annual leave with pay—and a pension to be earned.

You will play your part in defence against aggression. You will serve Canada—and yourself!

Director of Personnel Manning,
R.C.A.F. Headquarters, Ottawa.

Please mail me, without obligation, full particulars regarding enrolment requirements and openings now available in the R.C.A.F.

Farming In Britain

FARMING HAS ALWAYS BEEN one of Canada's leading industries and it is of great importance to the economic welfare of the country. In Great Britain, however, there has been little development in the national economy and few advances have been made in the industry there in the last decade. During the war the small amounts of food could not be shipped to Britain and since then economic difficulties have prevented the importation of normal quantities of wheat and other foods. During that time, British farmers have made great efforts to increase production and they are continuing to seek means of growing as much food as possible to help meet the demands of the markets in their country.

Show Extent, Of Progress Some indication to the extent of the progress which has been made was given by Mr. Thomas P. Devlin, secretary of the Clydesdale Horse Association of Canada, who returned recently from a visit to the United Kingdom. Mr. Devlin said that there are now approximately 500,000 farms in Great Britain and that agricultural production there is now four times what it was in 1914. The area under cultivation is one million acres of land under cultivation and in use as pasture, and the yield per acre compares favourably with that of any country in the world. The land is under intensive cultivation and the use of farm machinery has increased considerably in recent years.

More Tractors Are Now Used The use of tractors has increased by six hundred per cent, since the war. Mr. Devlin said, and there are now more tractors per acre than there is in any other country in the world. British farmers can do more to increase production by increasing their population there, but it is interesting to hear of the successful efforts which are being made to increase production. There are many ties between British and Canadian farmers and there is continuous exchange of information and ideas between them. Doubtless some of the improvements now employed by British farmers were learned in this country, but in turn, Canada has profited from the knowledge and experience of British farmers. There is widespread admiration here for Great Britain's progress in agricultural production.

Manitoba Looking For Biggest Tourist Trade in History

WINNIPEG—Manitoba is heading towards the best tourist year in its history if advance enquiries are any indication.

Professional tourist branch officials said the enquiries from the U.S. and other Canadian provinces are up over the same period last year, and to set a record with more than \$23,000,000.

BECAUSE—Bacteria is often to urinary irritation and bladder discomfort and for half a century Dodd's Kidney Pills have been recommended from kidney troubles. Get Dodd's Kidney Pills at your druggist counter. You can depend on Dodd's.

KING DRUG
Box 673, London, Ont.

000

being spent in Manitoba.

The year visitors here may leave more than \$25,000,000 behind them. Town branch officials point out that there is every expectation to draw visitors this year.

They are the Canadian open tournament in Winnipeg, the Northern Manitoba trout festival, and 40 conventions are already scheduled for Winnipeg.

A few, but not many, American visitors may be disappointed, however,

Partly to encourage tourists, new regulations have been introduced by the province, the legislature recently authorized the expenditure of a record-breaking \$13,000,000 for construction of new highways and maintenance of old ones.

Tourism officials have carried out an extensive advertising campaign in American and Canadian newspapers, urging visitors to "Come to Manitoba."

Other Canadian provinces are also preparing for "the best year yet," a Canadian Press survey shows. Last year, England, Australia and New Zealand were the top three countries in Canada. Of this, United States tourists left \$255,000,000.

CLOSED TRAP NETS

The earthquake in British Columbia, March 14, was sufficiently severe to cause the closure of trap nets throughout the province.

The first known paint bushes were made of reeds. Feathers, and then animal hairs were used before bristles.

NEW U.S. CONSUL-GENERAL
Richard Porter, Bartwick, is the new Canadian consul-general in Montreal, shown as he began work following his arrival from Ottawa yesterday. His new post is one of the most important consul-general jobs anywhere.

Funny and Otherwise

"How's your new play go?"

"Well, there were seven scenes."
"Five go on."
"Six before the final curtain and one after it."

With the high cost of lumber and what's happened to the purchasing power of the 5¢ piece, it might be well to know how the wood nickel you can get.

"I'm saving," he replied.
"But that makes 120 per cent."
"Don't I know it!" agreed Sam, with a groan.

Dodgin had recently been approached by a number of people, works, but his name was not known to all the men. One day, while on his rounds, he came across a couple of men sitting in a quiet room having a smoke.

"Who are you?" asked one of the men.

"I'm Dodgin, the new foreman," he answered.

"We're sit down and have a smoke."

A dashing young man pulled his sports car into the curb to speak to a pretty girl. "Going my way?"

"Young man," she said, tossing her head, "a public street is no place to speak to a passing girl you like." No. 4, Ashland Place, Wm. Creighton Square, telephone 2237.

POLITICAL—"My boy said he'd like a job in your department?"

Officer: "What can he do?"

Political: "Nothing, sir. He's got a good education."

Officer: "Good! That simplifies matters. We won't have to break him in."

During September there were more heavy rains in the southern parts of Alberta and Saskatchewan, with extensive flooding. The rains were particularly heavy in northern Saskatchewan, and more than 50 per cent in Manitoba.

Heavy rains last August, while halting the harvest in wide areas of Alberta, Alberta, nevertheless materially improved the over-all moisture situation for the 1952 crop. There was a marked increase in the new crop in many western farmers still have to get about 130,000,000 bushels of grain in the ground, while it was 160,000,000 bushels in last autumn's harvest.

bushels of grain in the ground, while it was 160,000,000 bushels in last autumn's harvest.

During the first months of December, January and February the winter snowfall was about twice as large as in the previous year, and the snow also increases of 10 to 15 per cent in northern and central Alberta, southwestern Saskatchewan and 35 per cent in eastern Saskatchewan. There were deficiencies in southeast Saskatchewan, northern Saskatchewan, eastern and western Manitoba.

In the first two weeks the sprouts should

Another method is to place the seeds on wet blotting paper or a saucer, then cover them with a glass tumbler. The giant seedlings must be transplanted in the soil or four or five days the fertile seeds will sprout.

Elephant Seal Caught Off B.C.

UBJECT to a 10-cent-a-day elephant seal, representative of an almost extinct southern Pacific species, was caught here recently.

The seal, which was captured by Simon Peter, an Indian fisherman of this town on the west coast of Vancouver Island.

It is believed to be the first of its kind ever caught in British Columbia waters.

The seal is about 14 feet long and weighs 1,500 pounds.

Its head has a distinct resemblance to that of an elephant.

The elephant seal is unusually inhabitable in the waters of the southern hemisphere.

HELP FOR Your Itching Piles OR NO COST

If you have internal pile treatment that does not quickly stop the itching, then you have probably got your piles.

1/2 cup of a package of almond oil and drug store soap as directed.

You will be amazed at how quickly you

will be rid of those giddy piles.

For the next few days, take 1/2 cup

of the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

After 2 or 3 days, take 1/2 cup of

the soap and add 1/2 cup of water

and 1/2 cup of warm water.

Boil this mixture stirring well after each addition. Cool, strain and mix with the soap.

Apply this salve every hour.

the soap and add 1/2 cup of water

OUR COMPLETE SHORT STORY—

HE STRUMS A GAY GUITAR

By KERRY WOOD

"I COULDN'T help it," Corby explained why he stayed away from a job. "I had a chance to play at the Valley Dance."

Some said he was a man, except that he did it with a guitar. Corby came to Willowvale when he was old enough to be done with school studies, too, having learned spud and crooked wrinkles. He set up in a cabin on the edge of town, where he didn't need to go far to offer his services. He also drew a steady income by giving shows with invites to their kitchens.

Women who should have known better paid him well. It stood well with Miss Cleon Hagen, wife of the Widow Masters, who was clerk of the hotel where they issued marriage licenses.

"I'll sing you one called Dreamy Love," Corby would say. "Might've been written for you."

A girl was never sure. Oh, he could do fancy carpentry and he knew panting and had a dandy eye for women. Now and then, regular, Corby would come along. The odd-job man would offer him a steady job. But he'd never work more than a few days because he'd want to spend a picture or two and then he'd go. So Corby became an odd-job man, with fiddlin' on his guitar and singing songs in his main interest. Kity to

Test Tungsten Sample At Yellowknife

Kate Simpkins, the teacher. Miss Simpkins hung onto Corby nearly a year; they danced and pined-fished together. She'd get herself a lady's maid to scrub and polish. But Corby kept singing, so Miss Simpkins had her sing a cry for him. And she did.

"I'd be glad to dig your garden, only—Well, I'm kinda busy right now."

"What, Corby?"

"Truth is, I'm learnin' a new set o' guitar-chords."

"I'm a little adder-man, Corby."

Then he met up with Mrs. Masters. A fine woman, the kind that's called good. She'd married young and lost her husband in pneumonia. Corby sang her The Widow in Gray one night. Mrs. Masters caught it good. She stayed home for a while, then got out her chin and said:

"Corby, I love you."

"Ma'am, that how I feel about you."

"We'll get married right away."

"Yes, ma'am," agreed Corby. "But I got a few things to settle first."

"Well, we'll never have a larger house than my old shack."

"We can live here, Corby. I own this place, clear title and no mortgage. That's swell, I mean Corby."

"I'm a little adder-man."

"We'll get married right away."

"Yes, ma'am," agreed Corby. "But I got a few things to settle first."

"Well, we'll never have a larger house than my old shack."

"We can live here, Corby. I own this place, clear title and no mortgage. That's swell, I mean Corby."

READ SIGNS OF LIFE HEED

CARS BY THEMSELVES ARE NOT KILLERS

The modern automobile, given reasonable attention and care, is mechanically safe. But you can't always trust the man or woman at the wheel.

Most of the traffic accidents this season — by a wide margin — will be due to HUMAN FAILURE ... not anything going wrong with the car itself. Drivers will fall asleep. They will park carelessly. They will take their eyes off the road; they will do other foolish things, forgetting that the impact of collision at 60 miles per hour is precisely the same as driving a car off the roof of a fourteen-story building.

DEATH IS TOO HIGH A PRICE TO PAY FOR CARELESSNESS

Be Careful - the life you save may be your own!

Wm. Basby has purchased a new car. It is a fine looking auto. The finish is a deep green. His friends have been congratulating him on the selection he made. This fall Mr. Basby will retire from his position with the Alberta government and the residences the ladies sent in an alarm.

A few days ago Friday morning near the home of Al Wilson, gave the fire brigade a run. By the time they arrived on the scene the women living nearby had beaten out the fire. Since there was a wind blowing and the flames were big, getting near the residences the ladies sent in an alarm.

Work started Monday on the new school to be erected on the old school site. At present machines are excavating the basement. Great piles of building material are on hand. The school is not expected to be finished until about the first of next January.

Girl friend—Well, darling, if I didn't wear all these nice clothes would you still think I'm beautiful?

Boy friend—Let's decide that question right now.

and Quebec Coop.

TCA IN FLAX FIELD

One of the major factors limiting flax production in Western Canada is the inability of this crop to compete successfully against weeds.

The introduction of TCA has played an important part in solving the weed problem in flax, but 2,4-D and 2,4,5-T are also effective. In many fields, unfortunately, containing a mixture of weeds, 2,4-D merely results in a more vigorous growth of the grass weeds, such as Green Foxtail (Pron Grass) and Wild Millet. One of the newer chemicals, TCA (Trichloroacetic) offers considerable promise for the control of Green Foxtail and certain other annual grass weeds in flax. TCA will not, however, kill the weeds.

Effectiveness in Flax. The recommendations of the 1951 North Central Research Conference include this statement: "Three years' data have shown rather consistently that sodium and calcium TCA at rates of 6 to 10 pounds per acre, will effectively control *Setaria* (foxtails) in flax when applied at early stages of growth without damaging flax. Best results are obtained when applications are made when the *Setaria* and flax are approximately 4 inches high."

TCA and 2,4-D and Sodium TCA and 2,4-D can be mixed and applied together dry. This will control susceptible broad-leaved weeds and Green Foxtail at the same time. Mix one gallon of TCA (foxtails) in flax when applied at early stages of growth without damaging flax. Best results are obtained when applications are made when the *Setaria* and flax are approximately 4 inches high.

SODIUM TCA IN FOXTAIL. TCA acts on the roots of the grass plants. Therefore, it is necessary to spray to moist soil in the soil to the depth of the grass roots. If the soil is very dry, little of the TCA may reach the roots. The TCA will not penetrate the soil to the depth of the roots and is likely to be effective. On the other hand, heavy rains immediately following application will wash the TCA below the root zone, again with disappointing results. Thus, to obtain good moisture content, plan the treatment to avoid weather for a few days, which would be most important to successful treatment with TCA.

**REPAIR OF TREES
GIRDLED BY FIELD MICE**

Girdling and subsequent damage to many valuable ornamental and other trees has occurred this past winter due to the increase in the number of field mice. To save some of these damaged trees from complete destruction immediate action is of the utmost importance. Painting over the girdled bark and wood is no value. The only method of saving trees that have been completely girdled is by bridge grafting. This is recommended for a most widespread form of damage in Southern Alberta.

There are two ways of bridge grafting: the L-shaped and the inlay methods. The L-shaped graft is best suited for large diameter girdled trees. The first step when preparing to graft girdled trees is to evenly trim all jagged edges, the bark being cut through to the card wood. Scion wood secured from the previous season's growth should be 3 to 4 inches longer than 2 x width. If the L-

shaped method is to be used, L- and inverted L-shaped flaps are cut in the healthy bark above and below the scion insertion and the flap gently lowered. Scion pieces are then inserted at both ends that are to face against the tree and a shorter level made opposite. The scion ends are then placed under the flaps, preferably with a slight bow, and fastened with a small nail.

The inlay method requires three to four inch bevelled cuts that do not extend to the opposite side. This makes thick cut ends that are relatively easy to drive into the wood. Place the end of the scion in the girdled section according to its prospective position, mark the outline of the bark above and below the wound. Remove the pieces corresponding to the scion size in the outlined areas, clean out the cambium tissue. Insert and nail the scion in place with small nails.

Scions should be placed four to six inches apart along the trunk with the buds pushed off the exposed outer surfaces should be waxed with a brush wax, and bound with three to four layers of one and a half inch wide strips of cotton and waxed again. It is important that the scions be well packed with the field dressing upwards. It is further recommended that dormant scion wood be used, although some success may be anticipated from the use of semi-dormant wood.

A limited number of pictorial charts are available from the Lethbridge Experimental Station, illustrating these grafting methods.

A referendum is "referring of certain questions or of such question under certain circumstances to the electorate for direct decision by a general vote on a single question," according to the Oxford dictionary.

It is proposed to give the people

the right to vote on a bill introduced

to spread information, to make
